

DUAL INJECTOR PRO+ POST TREATMENT ADVICE

Reactions from treatment:

Reactions from treatment include: skin redness and flushing, tightness, itching and tenderness. Erythema can occur following treatment, but will resolve within a few hours.

Effects will usually typically resolve within hours and many people are able to return to their normal activities the same or next day. Some people may react differently and may experience these reactions for longer. However, these reactions are temporary and typically resolve within 3-4 days as the skin returns to normal.

The RF + Electroporation procedure may cause areas of bruising although this would not normally be expected to occur, the eye contour being the area at most risk. Any such bruising will be temporary. If you are taking any medication or dietary supplements that can affect platelet function and bleeding time, the severity and period of bruising can be extended, also the presence of petechiae (small red or purple spots beneath the skin) may be observed.

Post Treatment Advice:

- Gently wash the treated area on the same day, but do not rub or massage the face for 24 hours. Cleanse using a mild cleanser.
- Make up can be applied once the skin has settled.
- Refrain from extreme temperatures such as intensive sun light, saunas, sunbed, steam bath, and hot showers for the rest of the day.
- Do not participate in activities that may cause excessive perspiration for 12 hours following treatment.
- Apply a sunscreen with an SPF30+ (such as the CLINICARE Sun Shield Silky Cream SPF30) on a daily basis.
- Avoid electrolysis, waxing, bleaching (face), depilatory creams, laser hair removal for at least 72 hours.
- Do not swim in chlorinated water for the rest of the day.
- Please report any concerns to your practitioner as soon as possible.

Recommended skin care in between Dual Injector Pro+ sessions:

Daily application of a gentle skin care is highly recommended following the procedure for the acceleration of regenerative processes and consolidation of procedure results.

We recommend CLINICARE's Home Care range to achieve the most from the CLINICARE treatment. Please see details for the 3 home care ranges over the page.
